

Was the discussion of ethics useful and/or interesting?

--The discussion of ethics was very interesting and I believe later in my career will be extremely useful, hence I plan on taking the course of ethics in engineering my senior year.

--Yes. It was a unique way of approaching applications of chemistry and business decisions.

--The ethics portion was taught better in this class than my other classes.

--Provided a little extra subject matter to the course, outside of tradition chemistry realms.

--Totally! I love the model you've given us and already plan to use it in other courses and more importantly, in future decision in my career.

--Definitely useful in gaining a broader view of what others' opinions might be, but you can't force people to be ethical

Was the time spent on ethics too much, too little, or about right?

-I think the class time was a little short but once again it was present in class and it is our responsibility to do the other work on our own.

-About right. Could have been more, but that might have gotten redundant, since arguments were basically the same.

-Again, personally I think ethics are interesting and would like to go deeper it, but for this class that should not really be the focus. I think the time was about right.

-Just right.

-We didn't spend too much time on it, so about right.

-Just right. Kept the focus on chemistry but still took the time to look at the issues from another discipline's POV.

-Could probably use some more, try to get people to be more open minded about all possible reasons behind why people might do what they do.
