

Assignment #1

Name: _____

.6 .7 .8 .9 1 *Specific:* the orientation of the building and the building proportions are logical based on the specific location--optimizing the sun's movement to provide daylight and be responsive to the particular climate; placement of windows (30% opening) optimizes the opportunity to provide balanced daylight within the space; models a room that displays the windows and the light and shadows effectively; demonstrates command of the concepts and applies software effectively. (the viewing angle of the room is critical--so that it is possible to gain a clear view of the cast light and shadows; the size of the images should be large enough to be able to see details and content clearly). (valued at one point)

.6 .7 .8 .9 1 *Comprehensive:* provides an organized, logical representation--comparing the different times of day and season (the size for the rooms should be consistently the same so that the images are comparable). (valued at one point)

.6 .7 .8 .9 1 *Effective Graphic Communication:* information is graphically clear, organized and has appropriate hierarchy, use of text and effectively shows the shadows as related to the window openings. (print quality is clear & sharp--not pixelated images; the shadows should be of a contrasting tone that effectively shows definition; the text should support the content and not dominate the pages; should demonstrate good use of the page and white space; the presentation should avoid extraneous graphic lines; color should be used sparingly and only if it helps make the content clearer). (valued at one point)

TOTAL: _____/3
